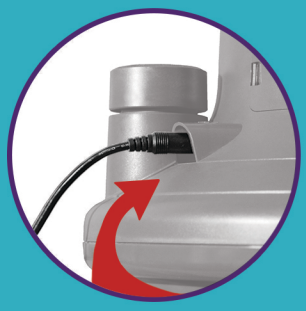
QUICK STEP GUIDE:

FOLLOW THESE 10 SIMPLE STEPS TO 'KEEP YOUR COOL'.

1

Remove tank cap. Fill with 1 gallon of water. Do not fill past bottom of the water tank strainer. Replace cap. Hand tighten to seal.

2



Plug in power cord to back of unit.

3

Plug in power cord to power outlet.

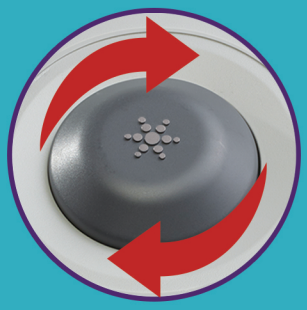
4

Press power button.

5

Press fan button to select fan speed.

6



Reset cooling control by turning the cooling dial to the right until finger-tight. Do not overtighten.

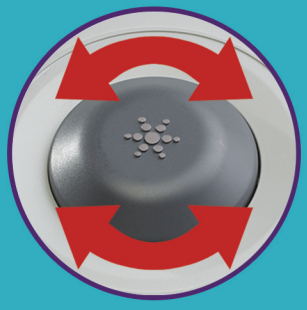
7

Open cooling control by turning cooling dial 2 full turns to the left.

8

Press cooling button to activate cooling function. Wait 30 seconds.

9



Turn cooling control slowly left or right until desired atomization is achieved. Enjoy.
